

The instruction of EEPROM ADAPTER voltage adjustment

Press "start" you'll see the default value of voltage is 3.71V. You can choose adjust it by pressing button "left" or "right", then press ok to continue saving dump first and then programming new mileage. Shown as figures below

When programming the new mileage, you'll still get the tip of voltage adjustment, just do as shown above. Then you'll get "successful". Shown as figures below

Finally, you will see "success", then exit directly.
